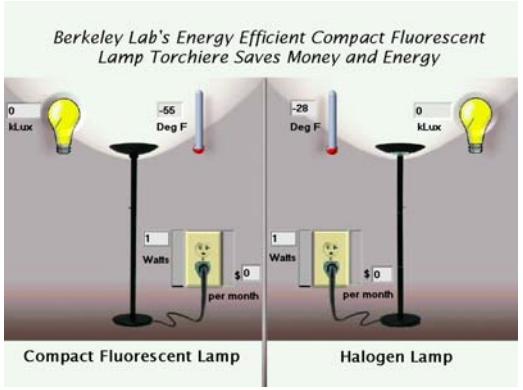
Final Graphical User Interface



Synopsis

Develop a mobile display to demonstrate the energy efficiency of the Environmental Energy Technology Division's compact fluorescent torchiere lamp in comparison to a traditional halogen torchiere.

Project Drivers

- Design a graphical user interface that effectively communicates energy efficiency
- Design a lightweight mobile display with compact components
- Deliverables in 8 weeks

Keys to success

- Defining requirements
- Brainstorming concepts and prototyping
- Tracking cost and schedule

Model of mobile display

Original stationary display
