

Notes:

1353W/m²

22% efficiency at end of life

500 W req'd

$500 / (1353 * .22) = 1.7$

Therefore: Need 1.7 m² of solar cell
projected area at a minimum

Height of cell panel is 6 m

Width of minimum projected area = $1.7 / 6 =$
.28 m
